

SEAL AND SAVE

CRACK SEALING IS THE SINGLE MOST IMPORTANT STEP IN ASPHALT PRESERVATION

Sealing cracks will **prevent water** from getting into the cracks and causing further deteriorations. Cracks that are not sealed will eventually result in **pot holes**, surface depressions large crevices and sub base failure. This will result in very **costly repairs** and in extreme cases it may require a **replacement** of your road parking lot or driveway.

Contract Sealing uses only the highest proven quality sealant to fill the cracks and extend your pavements life.

Studies have shown that for every **\$1.00** spent on crack sealing, **saves \$6.00-\$8.00** in rehabilitation cost. With other treatments, costs are several times more per square metre.

TYPES OF CRACK SEALING

BANDAGE SEAL

ROUT SEAL

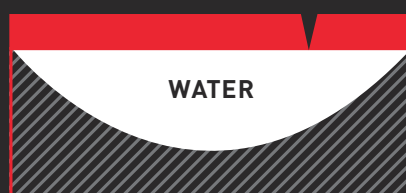

BENEFITS OF SEALING

- ✓ REDUCES POT HOLES
- ✓ IS THE LOWEST COST PREVENTIVE MAINTENANCE
- ✓ PROTECTS YOUR SUB BASE FROM COSTLY REPAIRS
- ✓ EXTENDS PAVEMENT LIFE
- ✓ COST EFFECTIVE
- ✓ PROTECTS YOUR INVESTMENT

WHAT CAUSES POTHOLES?

Water flows through cracks in the asphalt surface

Water washes away the base metal causing more cracks

A hole is left, which when driven over causes a pot hole.
